Role	Data Analyst
Date	31 May 2026
Decision	IMPROVEMENT REQUIRED

Evaluation Score

Rule-by-Rule Breakdown

Rule Evaluation — Data Analyst

Rules Passed

Rule	Description	Weight
sql_2yr	SQL with 2+ years experience	95%
edu_bachelors	Bachelor's degree or higher	80%
exp_1yr	1+ year total work experience	80%
projects_1	1 or more projects on CV	70%
database	Database knowledge (SQL / NoSQL)	70%

Rules Failed — Areas to Improve

Rule	Description	Weight
python	Python programming language	80%
excel	Microsoft Excel / spreadsheets	80%
pandas	Pandas data manipulation library	85%
statistics	Statistics / probability knowledge	90%
data_wrangling	Data wrangling / cleaning skills	85%
visualization	Data visualisation (matplotlib / Power BI / Tableau)	75%

Personalised Improvement Tips

Based on your evaluation, here are targeted recommendations to strengthen your profile:

1. Add data visualization skills: matplotlib, seaborn, or Tableau.
2. Learn Pandas for data manipulation and cleaning in Python.
3. Practice data wrangling: handling missing values, outliers, and type conversions.
4. Master SQL — it is the single most important skill for data analysts.
5. Study descriptive and inferential statistics — hypothesis testing and regression.
